

Computer Maintenance Manual

Computer repair task | VR Maintenance Research | content v2

Use this sequence

Follow the visible object IDs and confirm the neutral device test only after the repair action.

Procedure

1

Disconnect the external power cable before opening the case.

2

Trace the power path to the PSU and the main motherboard connector.

3

Reconnect the motherboard power connector; keep the screwdriver on the tool tray.

4

Press the power button for the neutral device test and observe the result.
