

Fan Maintenance Manual

Fan repair task | VR Maintenance Research | content v2

Use this sequence

Follow the visible object IDs and confirm the neutral device test only after the repair action.

Procedure

1

Disconnect the power cord before opening the front cover.

2

Trace the cord to the fuse holder and identify the working replacement fuse.

3

Install the working fuse; keep the screwdriver on the tool tray.

4

Use the speed selector for the neutral device test and observe the result.

Verification points

- fan.power-cord
- fan.fuse-holder
- fan.working-fuse
- fan.speed-selector
